

PULSE GATE

PRESENTED BY

PulseGate Team

PRESENTED TO

Hackathon Judges · Stellar Partners

"Tickets should be easy to use — and hard to fake."

PROBLEM

01

UNCERTAIN PAYMENT & RECOVERY

When a purchase fails mid-flow, attendees lose confidence and organizers lose visibility. No ordinary database can prove what happened or guarantee a fair recovery.

02

UNPROTECTED RESALE & REFUNDS

Secondary markets have no enforceable rules. Resale happens outside sanctioned channels. Refunds depend entirely on seller goodwill — with no recourse for the buyer.

03

UNRELIABLE VENUE ENTRY

QR tickets can be screenshot, copied, or replayed. Venue staff need authoritative proof of ownership — not a database lookup that may be stale or spoofed.

NO ON-CHAIN GUARANTEE

NO ENFORCEABLE RESALE RULES

QR CAN BE SCREENSHOT & REPLAYED

OUR SOLUTION

PRODUCT LAYER

🔍 DISCOVER & BUY

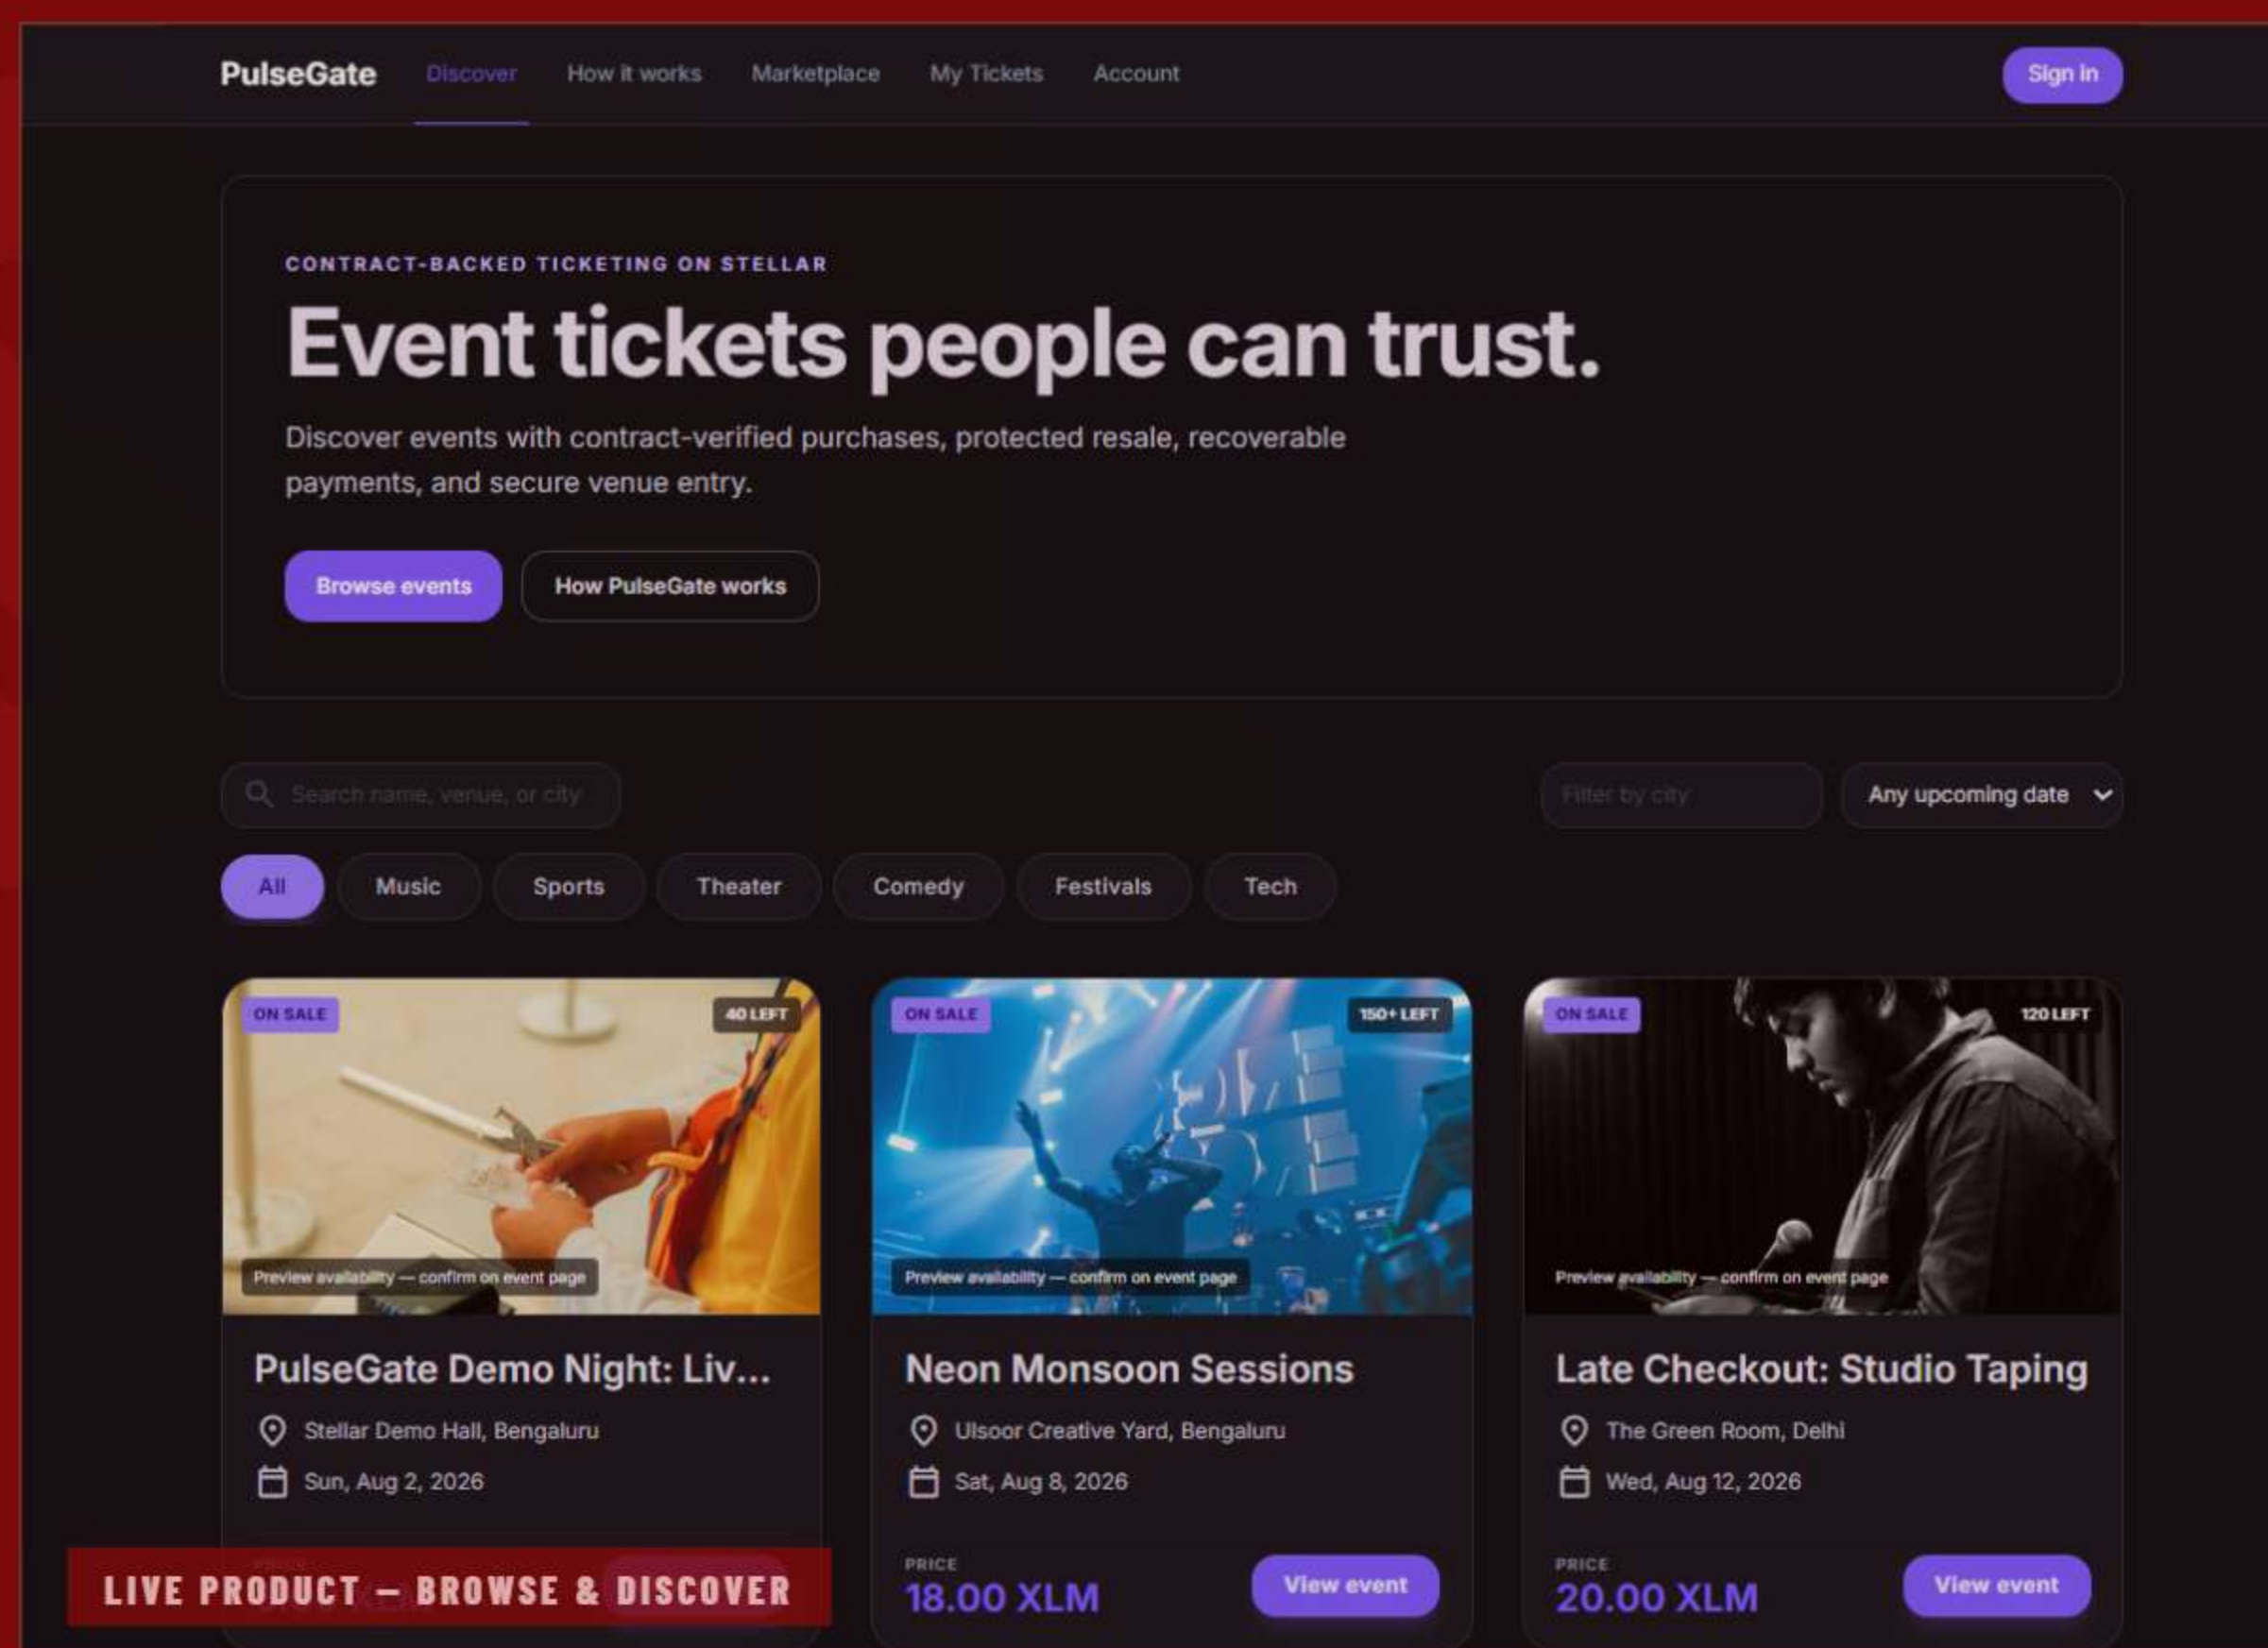

Browse events and purchase tickets with on-chain confirmation. Payment is escrowed on Stellar Testnet — ownership is yours the moment the transaction settles.

↕️ MANAGE & RESELL

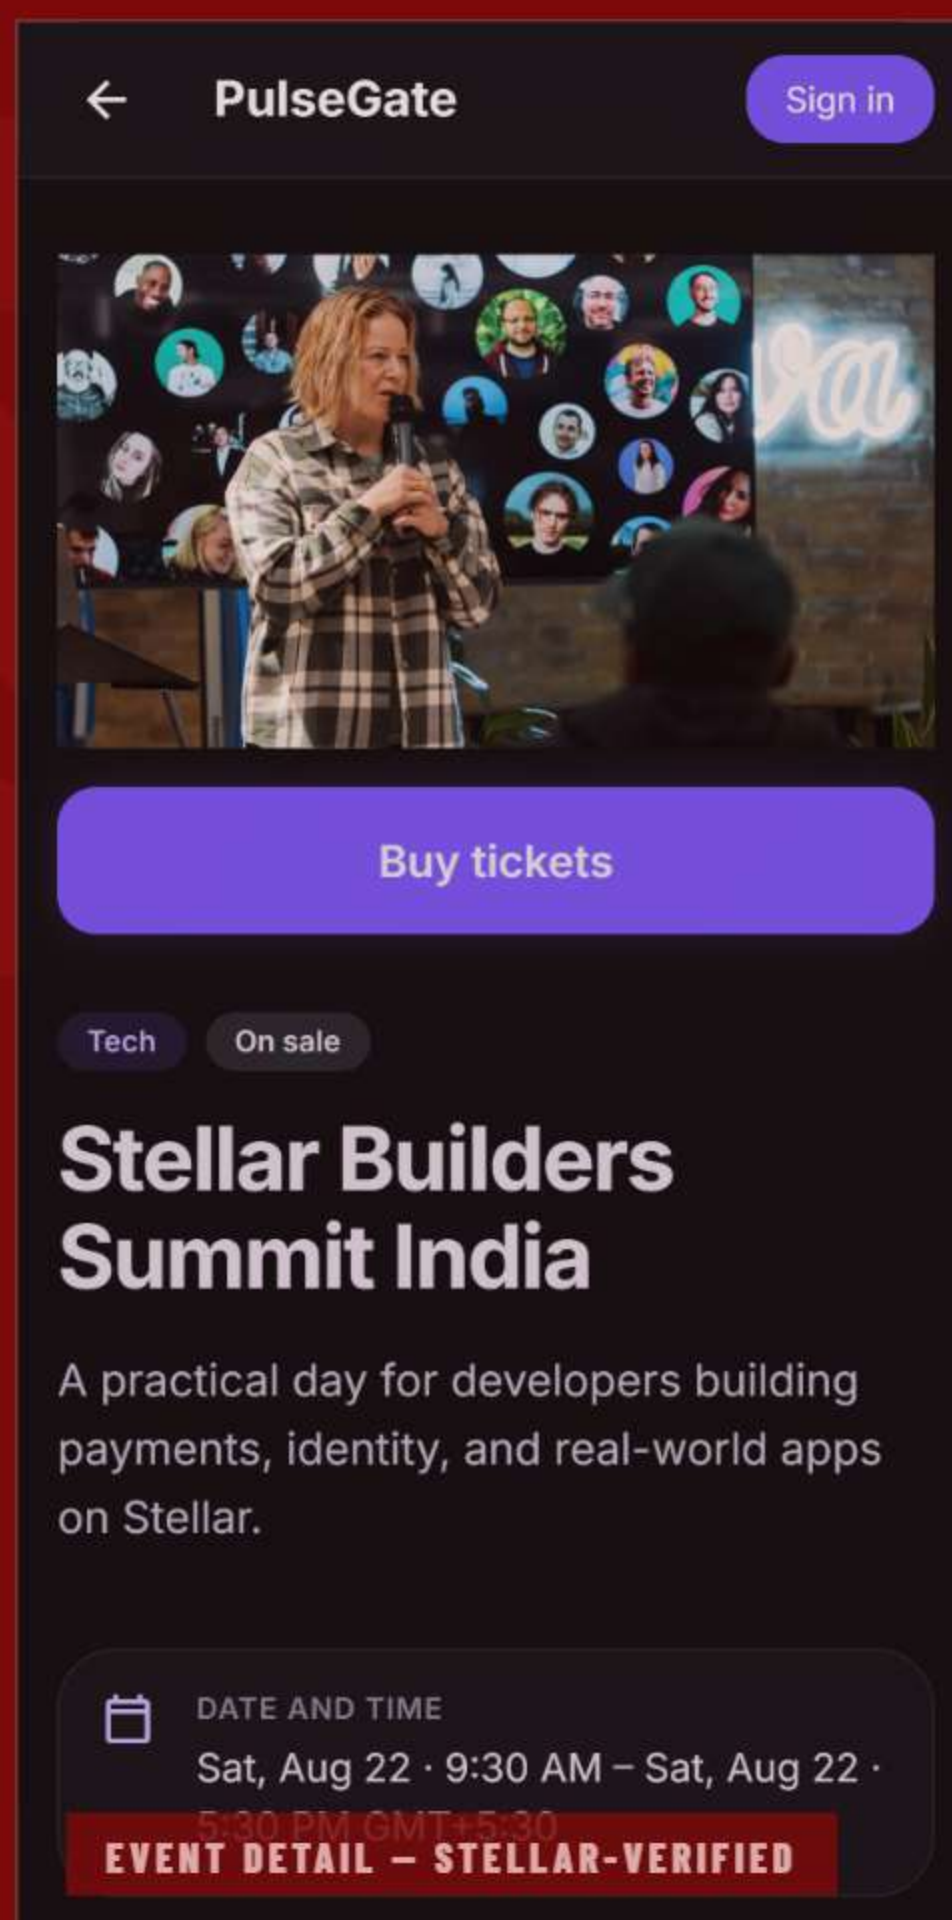

Transfer or list tickets through the Marketplace contract. Royalty splits are automatic on every resale — no side-deals, no off-platform risk.

⊕ ENTER THE VENUE

Show your QR at the gate. The scanner validates the payload signature, confirms ownership on-chain, and marks the ticket used — all before the door opens.

OUR SOLUTION

CHAIN-CONFIRMED ESCROW

The TicketContract locks funds at purchase. No release happens until conditions are met — or a verified refund is issued. Supabase mirrors state; it never authorizes the action.

ATOMIC RESALE SETTLEMENT

The MarketplaceContract settles price, royalty, and ownership transfer in a single atomic operation. There is no window for a partial or dishonest outcome.

THREE-GATE QR VALIDATION

Local payload/signature check → on-chain owner & status → organizer-signed *mark_used()*. All three must pass before the door opens.

MARKET OPPORTUNITY

EVERY EVENT

NEEDS TRUSTED TICKETING

A structural trust gap exists across every event category — concerts, conferences, sports. No market segment is immune.

ATTENDEES NEED CONFIDENCE

Every ticket buyer deserves proof of ownership, a recovery path if payment fails, and a fair refund when an event is cancelled. These are structural expectations — not premium features.

ORGANIZERS & VENUES NEED CONTROL

Organizers need auditable sales, enforceable resale rules, and reliable payout. Venues need entry that cannot be disputed — a QR that proves the original, unreplayed ticket.

THE THESIS

PulseGate addresses a lifecycle trust gap that exists wherever tickets are sold. This is a sourced structural thesis — no unverified market-size figures.

ARCHITECTURE

ATTENDEE & ORGANIZER INTERFACES

React/Vite frontend. Dfns wallet for attendees; Freightier for organizers. All contract calls route through a single handwritten *soroban.ts* adapter.

SOROBAN CONTRACTS – AUTHORITATIVE

TicketContract: purchase, transfer, refund, fund release.
MarketplaceContract: listing, resale, royalty settlement.

These two contracts are the only source of truth.

SUPABASE – DISCOVERABLE

Searchable read model – reflects confirmed on-chain state. Never authorizes a purchase, transfer, refund, or venue entry.

Chain confirms first. Supabase mirrors second.

GROWTH STRATEGY

GO-TO-MARKET HYPOTHESES

ORGANIZER LAUNCH

STRATEGIC CONSULTING

Onboard pilot organizers with end-to-end event creation, ticketing, and payout on Testnet. Prove escrow and refund before any mainnet commitment is made.

ATTENDEE CONFIDENCE

EXECUTION & REPEAT USE

Attendees who experience on-chain purchase confirmation and QR entry become advocates. Confidence drives repeat purchase without extra acquisition cost.

VENUE CHECK-IN

PROOF POINT AT THE DOOR

The scanner flow — signature validation, on-chain status, mark_used() — is PulseGate's strongest differentiator. Venue adoption validates the full trust chain publicly.

FUTURE ROADMAP

NOW

◇ **TESTNET PROOF**

End-to-end purchase, transfer, resale, refund on Testnet.
QR entry with three-gate validation deployed.
Both Soroban contracts verified on Stellar Testnet.

NEXT

👤 **PILOT ORGANIZERS**

First real events with real organizers.
Product hardening from live usage patterns.
Scanner reliability and Supabase mirror latency reduction.

LATER

⚡ **MAINNET & SCALE**

Mainnet policy and deployment.
Multi-event, multi-venue support.
Wallet integrations and Stellar ecosystem partnerships.
